

Online Media Direct Sitemap + IndexNow

User Guide | Updated: 2026-02-26 | Online Media Direct Ltd

This plugin adds fast, cache-friendly XML sitemap endpoints to your WordPress site. It is designed to coexist with Yoast SEO, Rank Math, and other SEO plugins without disabling them. Optionally, it can submit updated URLs via IndexNow (for participating search engines).

Note on Google: Google does not provide a reliable public “ping” endpoint for instant indexing. Submit your sitemap once in Google Search Console and keep it accurate.

Quick reference

URL	Purpose
/omd-sitemap.xml	Sitemap index. Submit this once in Search Console.
/omd-sitemap-recent.xml	Delta sitemap containing recently modified URLs.
/omd-sitemap-{posttype}-{page}.xml	Chunked sitemaps per post type.

Setup checklist

- Install and activate the plugin ZIP.
- Confirm /omd-sitemap.xml loads (HTTP 200).
- Add /omd-sitemap.xml in Google Search Console (one-time).
- Exclude /omd-sitemap* from HTML caching and purge cache.

Troubleshooting

- 404 on sitemap → Settings → Permalinks → Save Changes.
- Homepage HTML at sitemap URL → exclude /omd-sitemap* from cache and purge.
